

U B E R

Unlimited Uber  
Rides

The Uber app, like most applications uses an IMEI(International Mobile Equipment Identity), a unique 15-digit number assigned to all cellular devices. Unfortunately for Uber, this number can be changed/spoofed programmatically.

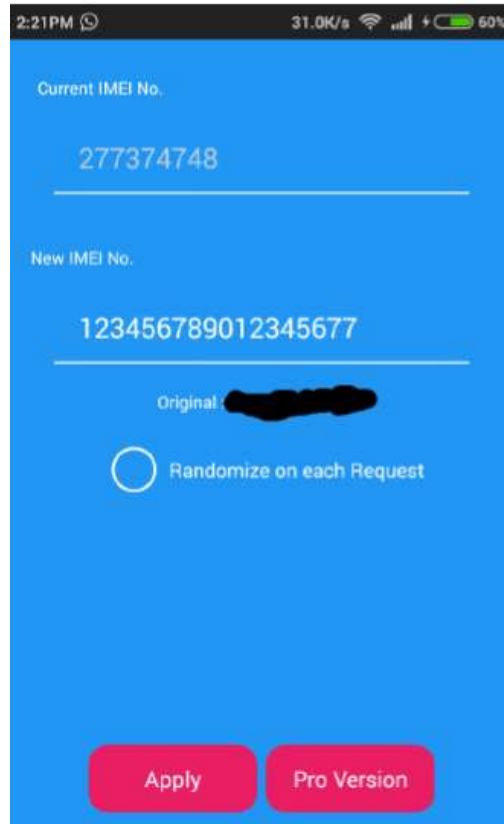

One needs a **Rooted Android** and 3 applications: the **Xposed Framework**, **CardGen** and **IMEI changer**. (all available on Google Play).

1. Download and Install the **Xposed Framework**. [http://dl-xda.xposed.info/modules/de.robv.android.xposed.installer\\_v33\\_36570c.apk](http://dl-xda.xposed.info/modules/de.robv.android.xposed.installer_v33_36570c.apk)
2. Go to play store and Install **Cardgen**.  
<https://play.google.com/store/apps/details?id=com.mrma.cardgen&hl=en>
3. Go to play store and download the **IMEI changer**. Go to xposed and check the module and restart. (I'm using wsm tools since I'm on miui – it's the same thing, stock android prefer xposed)  
<https://play.google.com/store/apps/details?id=com.vivek.imeichanger&hl=en>

After downloading all three, install each and restart phone.

Open the IMEI changer, this will allow modification of the exposed IMEI number at will allowing one to change it to a random number.

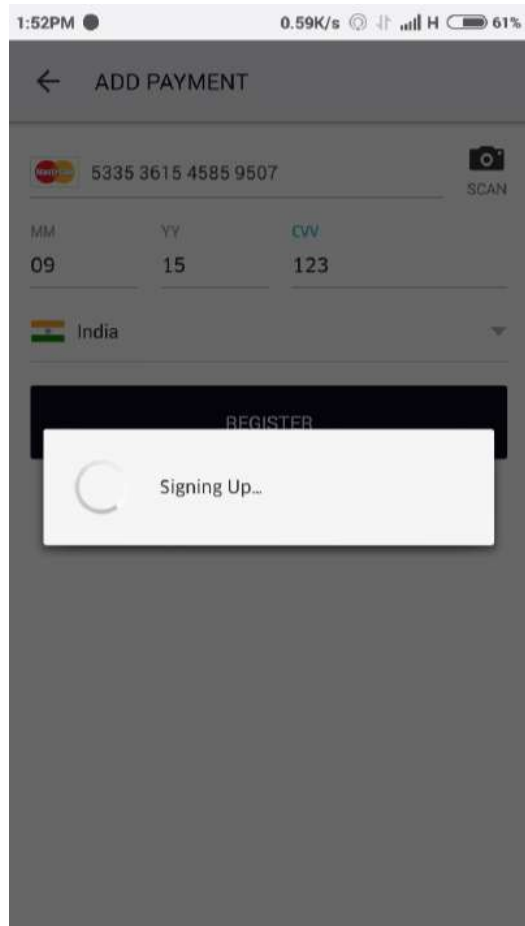

If a valid IMEI is needed, one can go online and find an IMEI generator.

Now, all that remains is clearing the Uber app's data cache and registering a new account.

The image shows a mobile application registration screen. At the top, the status bar displays the time as 1:51 PM, data usage at 0.00K/s, and battery level at 41%. Below the status bar is a header with a back arrow and the word 'REGISTER'. There are two social media login options: a red button with the Google+ logo and a blue button with the Facebook logo. Below these is a 'OR' separator. The form contains several input fields: 'FIRST NAME' with the text 'Karan', 'LAST NAME' with 'Bfbdbb', 'EMAIL' with 'bsbbd@gmail.com', and 'MOBILE' with a dropdown for the country code '+91' and the number '89599 49994'. A 'PASSWORD' field is shown with masked characters '\*\*\*\*\*'. At the bottom of the form is a dark blue button labeled 'NEXT'.

At adding payment methods, choose the credit/debit card option. Open CardGen and generate a new card number. Enter any valid year, month and cvv codes. Uber does not check the validity of this either.

Find a Promo Code online just go to Google and put in "Free Ride Uber Code", it varies by country and claim it in the app, and one will have a free ride every time.

**Repeat Process on each trip.**
